30.56sf/ctn.

Moldings available through your dealer

Hardwood flooring is a natural product. Because it is real wood, each plank will vary in markings, character, grain texture, and color. We do our very best to maintain consistency in our quality, color, and finish. Natural hardwood samples will be close, but not an exact replica of the product. Variations are common in natural products and your selection should be inspected before installation.

FloorScore certified products help the consumer choose products that add to a healthy home environment. This certification sets a standard for hard flooring surfaces and adhesives used in manufacturing, promoting better indoor air quality.

The California Air Resource Board (CARB) and U.S. Environmental Protection Agency (EPA) ensure that products are certified and meet emission standards for Formaldehyde. Our products are third party certified and in compliance with U.S. TSCA Title VI and Carb 2 (ATCM) emission standards.

Why Low VOC?

Volatile organic compounds are emitted into your home and can have an adverse effect on your indoor air quality, your family health and be an irritant to those with allergies and asthma. Our products are third party tested, and meet the strictest chemical emission limits for VOC.
